Search Notes

Dear Examiner Prieto,

Attached are the search results (from commercial databases) for your case.

Color tags mark the articles which appear to be most relevant to the case. Due to the 3-hr F&F time limitation, only NPL files have been searched. Pls submit another request if you wish the foreign patent files searched.

Please call if you have any questions or suggestions for additional terminology, or a different approach to searching the case.

Thanks,
Carol

Material Identity Number: E345-97008

Language: Korean Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: This paper describes design and implementation of a handoff protocol for distributed call processing in ATM-based PCS. We designed the handoff procedure using the SDL and evaluated it by the ObjectGEODE simulator. In our handoff protocol, a UP (User Process) performs signaling process related to the services. This can reduce mobile traffic signaling overheads and call establishment time by performing service control and location tracking of **mobile terminal** in parallel. Moreover, our protocol will not force the **mobile terminal** to move service profile to another **server** even during **roaming**. Thus, users will be provided the same service as in their home **networks** regardless of **roaming area** by our protocol. (5 Refs)
